## Method of Computing per day usage of library:

Data from four sources is collected for the calculation of per day usage of library.

1. Circulation Section (Daily circulation of books issue/return)
2. Actual visit to library as per visit record of the library (visit for newspaper reading, book reading, reference section, reprographic section, other library services, and etc.)
3. Use of N-List E-resources
4. Visit to online library portal of the library

While calculating per day usage, at first working days of the library were calculated. Data from the above four sources is collected to calculate the total visitors of the library. The number of total visitors were divided by the number of working days to calculate the per day usage of the library.

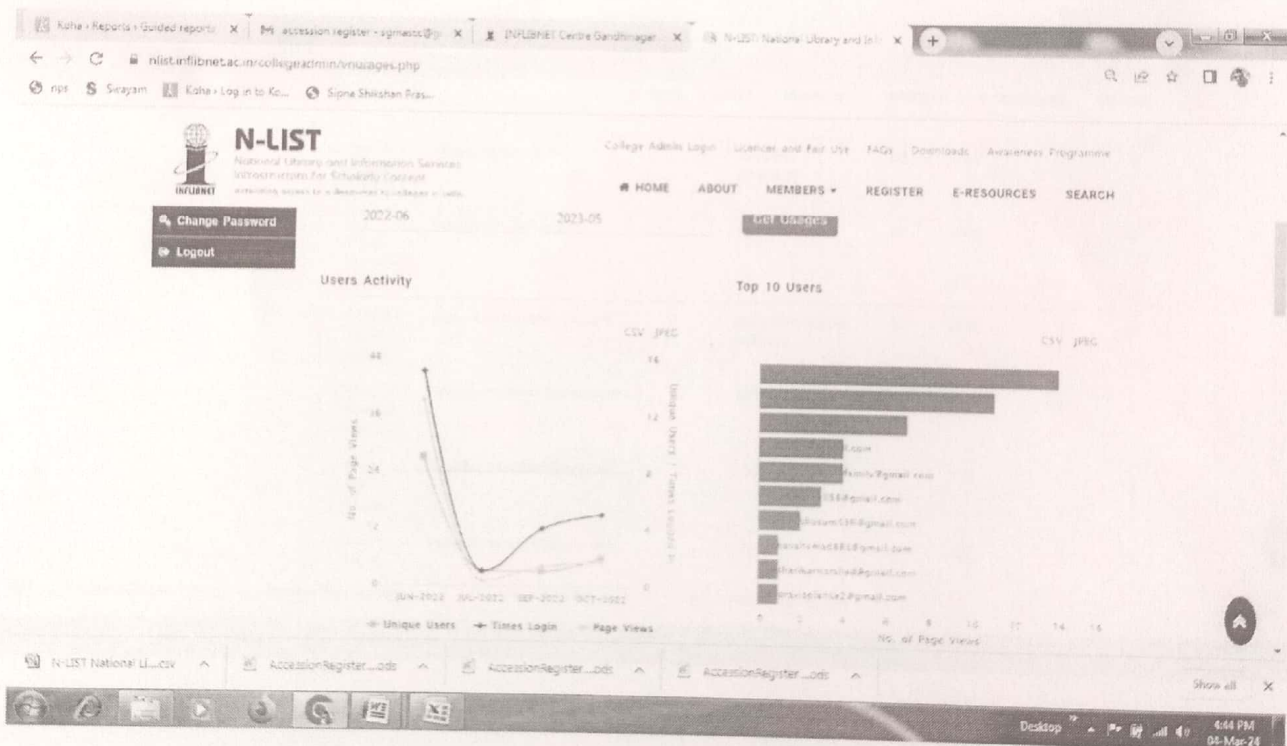

The per day usage of the session 2022-23 is

Total visit of users :

Visit to library Students and teachers	:3390
E-access student & teachers	: 13
Circulation of Books	: 2297 (return) + 2090 (issue) = 4387
Total use	: 7790

Number of working days 248 therefore per day usage is  $7790/248 = 31$  users per day
