

Method of Computing Per Day Usage of Library

Data from various sources is collected for the calculation of per day usage of library.

1. Circulation Section (Daily circulation of books issue/return)
2. Actual visit to library as per visit record of the library (visit for newspaper reading, book reading, reference section, reprographic section, other library services, and etc.)

While calculating per day usage, first working days of the library were calculated. Data from the above two sources is collected to calculate the total visitors of the library. The number of total visitors were divided by the number of working days to calculate the per day usage of the library.

Per day usage between the year 2023-2024

Total working days = 290

Number of total visitors = 1721

Number of books circulated (issue and return) = 4475

Total = 6486

Average per day usage = 22.36 equals to 22 users per day.
